Burton J. Bogitsh, Clint E. Carter, Thomas N. Oeltmann : Human Parasitology, Fourth Edition before purchasing it in order to gage whether or not it would be worth my time, and all praised Human Parasitology, Fourth Edition:

2 of 2 people found the following review helpful. You Get What You Pay For (And not much else)By Doggy DiamondLike most general internists in America, I do not have much contact with parasitology. I bought the book to learn more about the topic and it fulfilled the expectation. It's a laundry list of organisms that have both a lot in common and their own idiosyncrasies. None of it is memorable and all of it can be obtained from reading any Internal Medicine textbook.1 of 1 people found the following review helpful. An outstanding self-study text for Medical Lab Technicians (MLT), ...By Steve in SeattleAn outstanding self-study text for Medical Lab Technicians (MLT), Medical Lab Technologists (MT) / Medical Lab Scientists (MLS), and other Pathology students.Parasitology as a whole is lightly touched on in MLT (associate level) and MT/MLS (Bachelors level) courses and certifications. This is a must read for anyone who works in a micro lab.0 of 1 people found the following review helpful. Four StarsBy Yesha

ShahIts a good option if no need to buy book. Book came like a brand new one.

Human Parasitology emphasizes a medical perspective while incorporating functional morphology, physiology, biochemistry, and immunology to enhance appreciation of the diverse implications of parasitism. Bridging the gap between classical clinical parasitology texts and traditional encyclopedic treatises, Human Parasitology appeals to students interested in the medical aspects of parasitology and those who require a solid foundation in the biology of parasites. This fourth edition has been fully revised to integrate the most recent molecular discoveries about mosquitoes, ticks and other arthropods as vectors, as well as the most effective therapeutic regimens. New to this Edition: Features expanded coverage of the evolution of parasitism and an extensive update to immunology of parasite-host interactions Offers an enhanced art program featuring life-cycle illustrations and additional SEM and TEM micrographs New Host Immune Response section for each organism Presents various parasites and examines how they interact with their hosts and respond to new treatments Easy to read with photographs, diagrams, and clinical case pictures throughout

"There are few textbooks for students studying medical parasitology. This up-to-date third edition is easier to read than many, making it a viable option for upper-level students."--Martha Gentry-Nielsen, PhD, Creighton University School of Medicine

Bridging the gap between classical clinical parasitology texts and traditional encyclopedic treatises, Human Parasitology appeals to students interested in the medical aspects of parasitology and those who require a solid foundation in the biology of parasites. This fourth edition has been fully revised to integrate the most recent molecular discoveries about mosquitoes, ticks and other arthropods as vectors, as well as the most effective therapeutic regimens."--Doody.com, April 24, 2013

About the Author

Burton J. Bogitsh received his undergraduate education in biology at New York University (University Heights) and his graduate education at Baylor University (M.A.) and the University of Virginia (Ph.D.). He is currently Professor Emeritus of Biological Sciences at Vanderbilt University. He has authored more than 100 publications in the area of parasitology and has co-authored a textbook in General Zoology. He is an associate editor of the Journal of Morphology, co-editor of Volume 2 of the Microscopical Anatomy of Invertebrates, and has contributed many chapters to numerous edited volumes on parasitology. His research interests are in the ultrastructural localization of enzymes in helminths with a primary focus on the digestive tracts of trematodes.

Dr. Carter received his B.A. and M.A. degrees in biology at Loma Linda University and his Ph.D. degree at the University of California at Los Angeles. He is currently a Professor Biological Sciences at Vanderbilt University. He has authored more than 70 publications with a primary focus on the biochemistry and immunology of parasites. He has contributed chapters in several edited volumes such as The Biology of the Tapeworm, Hymenolepis diminuta, and has served on the editorial board of the Journal of Parasitology. His current research interests are centered on the host-parasite interactions of the causative agent of Chagas disease, Trypanosoma cruzi.
