**From Brand: Springer Publishing Company : Improving Hospital Care for Persons with Dementia** before purchasing it in order to gage whether or not it would be worth my time, and all praised Improving Hospital Care for Persons with Dementia:

0 of 0 people found the following review helpful. Great resource of a very important topicBy Andrew C. KerwinGreat resource of a very important topic. More needs to be done for our healthcare system to become "dementia capable" and "dementia friendly" especially with the alarming demographic forecasts.0 of 0 people found the following review

helpful. HelpfulBy E VThis book is a must have for anyone working with geriatric patients in the acute care setting. I highly recommend.

What happens when a person with dementia is hospitalized? It is usually a fall, a hip fracture, a serious infection, or an acute exacerbation of congestive heart failure, diabetes, or another chronic medical condition that precipitates hospitalization, not the person's dementia. This book provides insights into the issues and gaps in quality of hospital care for patients with dementia. The book will help practitioners improve the experiences that patients with dementia encounter in acute care settings by offering actual case examples provided by managers of assisted living, emergency rooms, and community geriatric cases; by persons with dementia who live alone; and by other doctors and nurses who care for these patients. These case examples illustrate the challenges faced and suggest strategies for successful and appropriate treatment planning. This book will be useful for all hospital practitioners who encounter patients with dementia, from administrators, to nurses, social workers, physicians, gerontologists, and psychologists. "Hospital care of older adults with dementia has received surprisingly little attention among health care professionals. This text represents a new frontier in geriatric care and is an invaluable resource in helping to assure exemplary care for older adults in hospitals nationwide." -Mathy Mezey, EdD, RN, FAAN, Independence Foundation Professor of Nursing Education; Director, The John A. Hartford Foundation Institute for Geriatric Nursing, New York University College of NursingFrom the Publisher"Hospital care of older adults with dementia has received surprisingly little attention among health care professionals.
