From Joan M Kiel : Information Technology for the Practicing Physician (Health Informatics) before purchasing it in order to gage whether or not it would be worth my time, and all praised Information Technology for the Practicing Physician (Health Informatics):

Following both a patient and an employee through a physician visit, this is a "how-to" manual for implementing practice management solutions. The first section provides information and examples prior to the patient visit, and includes examples of physicians who utilize email and Web sites to attract patients, electronic scheduling systems to decrease wait time, and registration systems which can verify insurance information. The second section focuses on

electronic medical records, electronic referral systems, billing and collection systems, and follow-up patient education and discharge information, thus portraying the "future physician office visit." The third section centres on the physician practice manager's daily operations and how technology can achieve efficacy.
