Reissman, MD, MPH, U.S. Public Health Service and Centers for Disease Control and Prevention"The struggle to develop optimal ways of managing the psychological effects of war and disaster has always been at the forefront of theory and practice in mental health. This book is a chapter in this struggle, prompted by the changed horizon since September 11. The book masterfully balances the need for careful scientific skepticism with the need to take action to provide the best help possible to trauma survivors. This is essential reading for researchers and practitioners alike."--Alexander C.
