**From Brand: Springer : Interventions in Pulmonary Medicine** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Interventions in Pulmonary Medicine:

0 of 0 people found the following review helpful. Is indeed a very good book. Very clearly written By Abdon Is indeed a very good book. Very clearly written, concise, with enough BW color images supporting the written text, quite up to date in almost every topic. I've been reading various of these I.P books for my I.P training and this one gives me a very sharp image of my day to day practice in a concise way. Of course, you must read along with this book the current journals about the specialty (ERJ, Blue Journal....) but you can't go wrong with it.

Interventions in Pulmonary Medicine is an important new volume that addresses all areas of interventional pulmonology, a minimally invasive endoscopic way to diagnose and treat lung disorders. This volume contains dedicated chapters that outline the many issues related to lung cancer, both in early and advanced stages, from diagnosis to personalized treatment. It also covers bronchoscopic therapeutic options to benign conditions that are highly prevalent, such as COPD and asthma. Techniques described in this volume are: laser therapy, argon plasma coagulation therapy, cryotherapy, brachytherapy, placement of intrapleural drainage systems, endoscopic treatment of emphysema, stents in the airway, and thermoplasty for bronchial asthma. Diagnostic procedures that are covered are: medical thoracoscopy, flexible and rigid bronchoscopy, endobronchial ultrasound, electromagnetic navigation, and trends in personalized treatment for lung cancer and other benign lung conditions. Chapters are written by experts and the developers of the techniques that are currently considered gold standard. Evidence-based reviews are presented for all topics and indications, and contraindications are discussed. Interventions in Pulmonary Medicine is a must have for pulmonologists, endoscopists, pulmonary oncologists, ENT physicians, thoracic surgeons, anesthesiologists, and intensive care specialists and their teams.
