**Elizabeth DePoy PhD OTR MSW, Laura N. Gitlin PhD : Introduction to Research: Understanding and Applying Multiple Strategies, 5e** before purchasing it in order to gage whether or not it would be worth my time, and all praised Introduction to Research: Understanding and Applying Multiple Strategies, 5e:

0 of 0 people found the following review helpful. Great book! Fantastic resource for basic definitions and info ...By Alison FellGreat book! Fantastic resource for basic definitions and info on efficient analysis of data. Very useful intro to research guide.0 of 0 people found the following review helpful. Three StarsBy Tanyalots of good info0 of 0 people found the following review helpful. Much better book than the one school selected.By CammyMuch better book than the one school selected.

Bridge the gap between research and practice with Introduction to Research: Understanding and Applying Multiple

Strategies, 5th Edition. This easy-to-read edition covers all the major research design strategies: qualitative, quantitative, naturalistic, experimental-type, and mixed method. And with the texts up-to-date research information and references, you will have a solid foundation from which to critique and understand research designs and their applications to healthcare and human service settings. Case examples provide real-life snapshots of what it is like to participate in different types of research processes, identify research dilemmas relevant to chapter subjects, and alert you to problems you might encounter. Authors make the topics more accessible, so research becomes more relevant - and topics come to life. Covers experimental-type, naturalistic, and mixed method design strategies to improve your ability to compare, contrast, and integrate different methods. Presents complex information clearly in a highly readable, and easy-to-understand, manner. Includes detailed discussions of qualitative and quantitative methodologies, a unique and balanced focus that makes this text more comprehensive than others in its field. NEW! Up-to-date research methods, strategies, and references, like digital sources, visual methods, and geographical analysis, give you the latest information on research in diverse areas of health and human services.

"Providing a bridge between research and practice, this text for undergraduate and advanced students in the health and human services helps readers develop their clinical intuition to inform research, thinking, and action. Early chapters cover philosophical foundations and offer guidelines on reviewing the literature and formulating research questions. Design approaches are then described, covering both experimental-type designs and naturalistic inquiry designs, and practical actions are explained, such as setting the boundaries of a study, collecting info, and statistical analysis. Stories from the authors' own research practice demonstrate how to improve practice through inquiry. This fourth edition contains new material on ethics and informed consent documentation, and a new chapter on seeking financial support for research ideas, plus practical hints for getting started writing a research proposal. A student website offers background on statistics, web links, sample forms, and reference lists linked to PubMed abstracts. DePoy teaches interdisciplinary disabilities studies and social work at the University of Maine. Gitlin teaches occupational therapy at Thomas Jefferson University." - Book News, Inc.
