World Health Organization : IPCS Mode of Action Framework: IPCS Harmonization Project Document (No. 4) before purchasing it in order to gauge whether or not it would be worth my time, and all praised IPCS Mode of Action Framework: IPCS Harmonization Project Document (No. 4):

The use of structured frameworks in chemical risk assessment promotes transparent, harmonized approaches. This book presents two IPCS frameworks originally published in Critical Reviews in Toxicology, in a user-friendly large

format. Part 1 contains the IPCS Framework for Analysing the Relevance of a Cancer Mode of Action for Humans, along with three case studies illustrating its application. Part 2 contains the IPCS Framework for Analysing the Relevance of a Non-Cancer Mode of Action for Humans. The output of a framework analysis is a clear statement of conclusions, together with the confidence analysis and implications of the findings. The framework provides a means of ensuring a transparent evaluation of the data identification of key data gaps and of information that would be of value in the further risk assessment of the chemical in question.

About the AuthorWorld Health Organization is a Specialized Agency of the United Nations, charged to act as the world's directing and coordinating authority on questions of human health. It is responsible for providing leadership on global health matters, shaping the health research agenda, setting norms and standards, articulating evidence-based policy options, providing technical support to countries and monitoring and assessing health trends.
