From Mary C Haven Gregory A Tetrault Jerald R Schenken : Laboratory Instrumentation, 4E before purchasing it in order to gage whether or not it would be worth my time, and all praised Laboratory Instrumentation, 4E:

The new edition of this widely-used sourcebook details the startlingly array of diagnostic equipment available in the medical laboratory of the nineties, and also covers maintenance and quality assurance for each type of instrument. This book includes 17 completely rewritten chapters and 7 new ones, on nephelometry and turbidimetry, gas chromatography, mass spectrometry, flow cytometry, automated immunoassay systems, automated blood bank systems, and physician's office laboratory instrumentation.

From the Author This book was written for medical technology students. It describes clinical laboratory methods and instruments--great topics if you're interested in laboratory medicine. I wrote five chapters and edited approximately one-third of the book. It was a learning experience--I learned that having an incompetent publisher doubles the work of the content editors and cuts sales by a factor of ten. That's why, two decades later, I'm self-publishing my novels.
