Craig A. Stepp JD MT(ASCP) CLS, MaryAnn Woods PhD RN CMA : Laboratory Procedures for Medical Office Personnel, 1e before purchasing it in order to gage whether or not it would be worth my time, and all praised Laboratory Procedures for Medical Office Personnel, 1e:

2 of 2 people found the following review helpful. Not a good learning tool at all!!By jewelsI purchased this book for a college course, as well as other classmates of mine. It was filled with inconsistancies and wrong answers throughout!

It made the class harder for us, and our teacher agreed!

This new, full-colour resource offers a comprehensive introduction to the medical and clinical laboratory. It gives clear, beautifully illustrated, step-by-step instructions on all aspects of laboratory bench procedures. The text guides readers from the initial physician's order through specimen collection, processing, testing, reporting, maintenance, quality control, and quality assurance. Covers topics not addressed in similar texts, such as toxicology, parasitology, anatomical pathology, epidemiology, and medico-legal procedures. Presents material about special procedures such as chemiluminescence, as well as information on hematology, chemistry, microbiology, immunohematology/blood banking, serology, toxicology/blood testing, coagulation, and urinalysis. Provides pedagogical aids such as charts, lists of tests, and guidelines for easy review. Illustrates procedures step-by-step using full-colour photographs--almost all taken in working laboratories. Offers information on mycology, parasitology, virology, and mycobacteriology in reference to AIDS.
