Good basic information for anyone new to Legionella controlBy Gordon GudgeonI would recommend this book to anyone who is looking for some good basic information on Legionella control.However the book itself split along this spine the first time it was opened.

Includes test questions to evaluate a facility in terms of Legionella risk, data on Legionnaires' lawsuits, preventive measures for domestic water systems and cooling towers, guidance for water sampling, system disinfection, and outbreak investigations; screening questions to help you select the best laboratories, consultants, and equipment

manufacturers; costs of equipment and procedures, and an extensive source directory of laboratories, consultants, and agencies worldwide.

From Scientific American "Overall, I found the book to be an easy read with well-defined topic areas. I would want to have a copy of this publication if I were involved in health and safety at a health care facility." From The New Yorker "This is a very useful resource work for operating and maintenance staffs of health-care facilities and professionals designing the water and HVAC systems for such facilities." "Matt has really tackled the thorny problem issues head on. ...I like the book because it is very much a 'what to do' book. There's no beating around the bush and it's written in a very chatty style. Although written by an American, the book is well suited to the Australian scene. Implementing the safety recommendations in this book should greatly diminish the risk of disease." -- Clive Broadbent, Clive Broadbent Associates Pty. Ltd., Weetangera, ACT (Australia) AIRAH Journal (Aug 96), Australian Institute of Refrigeration Air Conditioning Heating "Quite frankly, the approach and application of science in this text represents some of the best industrial (occupational) hygiene that I have ever seen in print! Get this book if you have responsibility for occupational health in a hospital/healthcare facility or if you want to read and learn a true-to-life approach to the industrial hygiene triad of recognition, evaluation, and control. You won't be sorry." -- Lawrence Stilwell Betts, MD, Ph.D., CIH; Oakland, California Applied Occupational and Environmental Hygiene (Dec 96), Applied Industrial Hygiene, Inc., a subsidiary of the American Conference of Governmental Industrial Hygienists
