Peak Woo : Stroboscopy before purchasing it in order to gauge whether or not it would be worth my time, and all praised Stroboscopy:

This book presents a complete picture of the art and science of stroboscopy. It includes not only comprehensive coverage of the imaging process, but also the disease process that exists in benign lesions, cancer, and neuropathology. Comparisons of normal images with pathologies are included to enhance readers diagnostic skills, and the use of stroboscopic images before and after therapy to determine results enhances their clinical skills.

Declan Costello, Post-CCT Fellow in Laryngology, *Journal of Laryngology and Otology*, (2009): "In the first half of the book, covering the basics of stroboscopy, a comprehensive and easy-to-understand explanation of stroboscopy is presented. This does not, readers will be pleased to hear, explore in detail the mathematical principles of how stroboscopy light sources work, but provides enough information for the clinician to be able to understand the basic principles of the equipment. ... This is a beautifully presented book and serves as an excellent atlas of benign laryngeal lesions." Melin Tan, MD, *Annals of Otology, Rhinology, Laryngology*, (2011): "...a significant contribution to the laryngology literature and provides a comprehensive guide to understanding stroboscopy and its clinical application. Clear schematic illustrations and beautiful color clinical photographs accompany the text." About the Author Dr. Woo is Professor of Otolaryngology at the Mount Sinai Medical School. He is a board-certified otolaryngologist with special interests in the voice, voice disorders, and surgery designed specifically to improve the voice. He leads a multidisciplinary team dedicated to the comprehensive treatment of the voice and larynx at the Eugene Grabscheid, M.D., Voice Center, an outstanding clinical and research center for voice disorders at the Mount Sinai Medical Center in New York City. He has published extensively on the diagnosis and treatment of voice disorders in peer-reviewed journals, presented numerous scholarly papers at professional meetings, and is a popular workshop presenter.
