**Glen Gillen, Ann Burkhardt : Stroke Rehabilitation: A Function-Based Approach, 2e** before purchasing it in order to gage whether or not it would be worth my time, and all praised Stroke Rehabilitation: A Function-Based Approach, 2e:

0 of 0 people found the following review helpful. great resourceBy moonriverThis is a great resource and every OT should have it in their library. Written by this year's Slagel lecturer.0 of 0 people found the following review helpful. Four StarsBy Kerry B Bloomergood24 of 25 people found the following review helpful. A valuable textBy Trad CappAs a grad student, I'm often scrutinizing the prices and contents of my textbooks. This text approaches the occurrence of stroke from a rehabilitative standpoint. The etiology and functional sequelae are given as a requisite background, but the main focus is on treatment planning and intervention. The authors cite the latest literature in research regarding contemporary treatment approaches, as well as providing rationales for why older treatments may no longer be appropriate.

This 2nd edition remains the only comprehensive evidence-based text on the Occupational Therapy management of the stroke patient. The book is based on the most up-to-date research on stroke rehabilitation and presents its content in a holistic fashion, combining aspects of background medical information, samples of functionally based evaluations, and treatment techniques and interventions. There are chapters on specific functional aspects of living after stroke, such as driving, sexuality, mobility and gait, and self-care. Instructor resources are available; please contact your Elsevier sales representative for details. Case studies are featured in every chapter to help the reader understand how concepts apply to the real world. 2 chapters that feature the true stories of stroke victims, presenting occupational therapy situations from the point of view of the patient. Key terms, chapter objectives, and review questions help students better understand and remember important information. 7 new chapters make this text more comprehensive than ever! Psychological Aspects of Stroke Rehabilitation Improving Participation and Quality of Life Through Occupation The Task-Oriented Approach to Stroke Rehabilitation Approaches to Motor Control Dysfunction: An Evidence-Based Review Vestibular Rehabilitation and Stroke How Therapists Think: Exploring Clinician's Reasoning When Working With Clients Who Have Cognitive and Perceptual Problems Following Stroke A Survivor's Perspective II: Stroke Reflects the current terminology and categorization used by the WHO and the new AOTA Practice Framework so students will be equipped with the latest standards when they enter the workforce. Updated medication chart presents the latest drugs used in stroke rehabilitation.
