As a new SLP graduate student this book is fantastic!By VKLet me just start off by saying that this book makes me want to focus on fluency disorders and more specifically "people who stutter." I just entered graduate school in the slp field and it was required for my fluency course to get this book.I'm really glad I did. The author gives great advice and the way he compiles all the various studies into a cohesive manner really lets the material have a lasting effect on the reader. You read a chapter and you feel like you not only learned something new about stuttering but you want to learn more (and there's a lot more to read)Stuttering is a fascinating phenomenon/"disorder" and it's no surprise that many of the expert clinicians in the field are also individuals who stutter. Because of their own first-hand experience with the "disorder" they're able to give a better understanding of what it's like to face a day in the life as well as how to expand not only your knowledge base but your emotional base as how to relate to someone afflicted by stuttering even if you don't stutter yourself.What's even better is that the book is written by a male SLP, and as one of the few male graduate students in the slp field I feel that some of the personal stories in the book really strike a cord with me. Not to say that this book doesn't reach out to the many fantastic and future fantastic female slp's as well.All in all it's a great book for anyone interested in stuttering, whether you be a

clinician, future clinician, family- member or friend of a person who stutters, or just anyone that is looking to learn something about something...1 of 1 people found the following review helpful. DisappointedBy ChloeI expected to receive the second edition based on description and the picture but instead I received an outdated first edition that isn't applicable for my class. What a waste of money...

...promotes an individualized collaborative approach to assessment and treatment with people who stutter and their families...provides specific clinical procedures with accompanying rationales
