CAG By A Customer This is a very good, literature based assessment of the use of vitamins, minerals, herbs, etc. for the treatment of disease. All of the recommendations are based on an extensive review of the technical journals. Dr. Werbach has arranged his literature based recommendations for common pathological conditions. He

recommends and categorizes various nutrients if the literature definitely supports its use, probably supports its use or there is not enough empirical evidence supporting its use. If you're an alternative health care provider, this book is a must buy!

From the Author My goal in writing the Textbook of Nutritional Medicine was to develop a easily readable, but science-based, textbook that provided guidance in applying the principles of nutritional medicine to the treatment of a large number of disorders. A great deal of time was spent reviewing the extensive literature in order to rate the quality of the evidence for (and against) each treatment, so that the reader could rapidly compare the various treatment alternatives.
