helpful. Read and shiver!!!!!!By FranciscaThis is a very important book on how the cure for cancer will probably never be found and the industry behind it! If like me you have lost a number of close relatives and loved ones to cancer you can't help getting angry with every page you read. Did they die for no reason other than human greed? Were there better alternatives for them? Was their suffering unnecessary? I think so! And one day it can be my turn, what will I do then? Will I dare stay away from the orthodox treatments and go find something else? But what? Many of the unorthodox treatments are only available to those who have enough money so many people will never have access to them and the only option is what doctor tell them to do. Therefore it is important to get as much information as possible ahead of time, don't be caught without the necessary knowledge at a very difficult time in your life. Although this book was written many years ago it is still very much worth reading and there are a number of updates done by the author a few years later.Sadly enough the author starts by saying that things were getting better for the alternative medicine because people were choosing it big time but, maybe because of that, everything is about to get far worse. The EU is about to ban a lot of health supplements and alternative therapies and lower the contents of vitamin and mineral supplements till they eventually will become useless. Much of the same will happen in the US, I think. I am sure that one day the only option will be allopathic medicine, whether you want it or not, and all in the name of profits and big business. This is the "free" world...The stories told in this book are simply fascinating and very well written too! It is the kind of book you don't want to put down till you have finished. Sometimes there are maybe a bit too many details for the layperson but bear with it because they all adds to the understanding of the situation. Sad to see that some of the biggest scientists of the last century were so badly persecuted..... Also sad to hear what their patients went through because of it. The information on the alternative ways to cure cancer, or at least to prolong life, is fascinating!Freedom to choose how you want to be treated should be a human right! No one should have the right to impose a certain treatment on you. Many of us pay very expensive health insurances but in the end it is them who decide how you should be treated and that is wrong! In my case for example, I use mostly alternative medicine, my husband does not, why can't we use our allowances together? As it is I have a little allowance and have to pay all the rest, while they never have to pay me any costs on regular doctors or medication. My husband doesn't make any use of his alternative allowance at all so we both lose out! But we have no choice.... I am not going to start making use of allopathic medicine, even if I have to save on other things!As I said get all the information you can, if possible before the illness strikes, because when you are ill or stressed out because a loved one is ill, it is a lot more difficult to make the right decisions! And sometimes after a treatment that damages your immune system there is no way back! Another book I can recommend is Anticancer: A New Way of Life, a very different book but also very interesting!

This gripping and controversial classic exposes the political and economic forces inside the cancer establishment.

From Publishers WeeklyCiting static survival rates, the medical establishment's support of "proven cures" including chemotherapy and its refusal to fund research into other therapies, Moss reveals that the medical establishment favors drug companies, carcinogen-causing and pollution-causing industries rather than potential and actual patients. PW called this a "tough-minded updated version of his 1980 The Cancer Syndrome ." Copyright 1991 Reed Business Information, Inc.
