Features updates to all chapters and lens types with a wealth of new information on silicone hydrogels, toric soft lenses, rigid gas-permeable fitting and patient after care. Presents a new chapter on dry eyes with expert guidance on treatment and practical management advice. Includes an expanded illustration programme and page design with full colour throughout including colour-coded sections and boxes to highlight key information for easier learning. Electronic access to brand new video footage of lens and eye care regimes, along with over 100 clinical photographs, images from the book, simulations and calculation tools.

From the reviews of previous editions: "The format is an intensely practical, hands-on guide to fitting all lens types, from straightforward sphericals through to sealed sclerals Each chapter is punctuated with different boxes containing practical advice, general advice, rules of thumb and warnings Unlike most textbooks, it would be quite possible to pick up this book and read it from cover to cover. In fact, I can recommend it."
